

FOR SMART CITY PLAYERS

A-to-Be Access Control™

••••• All information included in this document is subject to change as the product evolves

Mobility is about getting to places. But safety, security or sensitivity sometimes demand controlling vehicle access to these places, whether it's a company compound, a private condo building garage or an historical urban area where a local feel and quietness is of paramount importance. No matter the reasons, cities and citizens need a smart way to let people accessing these, as part of a city, of a community.

A-to-Be AccessControl™ is about offering seamless experiences to those using these control mechanisms. Together with A-to-Be® LinkBeyond™, the user benefits from license-plate recognition, radio-frequency or his smartphone to activate the gates. The complete solution offers integrated video surveillance for security and client service and support, with VoIP communication lines for remote operators.
